

Building Strong Families

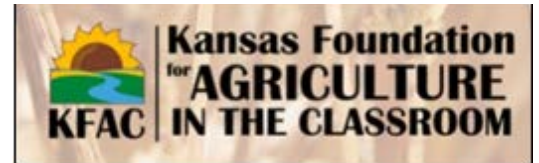

Life resources for health, wellness, finances, and positive relationships.

Today, many of us may be far removed from the farm, so teaching kids about agriculture is more important than ever! Luckily, there are great resources to help teach kids where their food comes from and spark their curiosity about all aspects of farming. From engaging lesson plans, computer games, gardening activities and virtual farm tours, these free online resources are perfect for agricultural education both in the classroom and at home.

KS Foundation for AG in Every Classroom, Every Day!

KFAC is a statewide educational program providing resources, training and support to schools, educators and volunteers so that they can meaningfully connect children to agriculture. This is done through AITC-designed lessons and resources, educator training workshops, newsletters, magazines, teacher awards, and volunteer projects and initiatives. The KFAC website includes many great resources for teachers in classrooms of all ages.

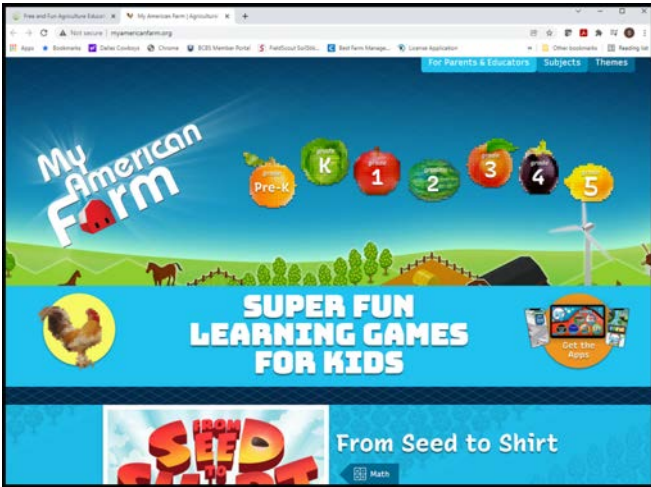

Food Farm 360

Take a 360-degree virtual reality tour of a farm at Food Farm 360. In each educational video, you can swipe left and right on mobile devices or click and drag on desktop computers to explore the farm around you. The unique and immersive experience will make kids feel like they're really on the farm with up-close shots of the animals and a 360-degree view of everything happening around them. The videos also teach kids what life on the farm is like from day to day, as well as several fun facts about animals and crops.

My American Farm

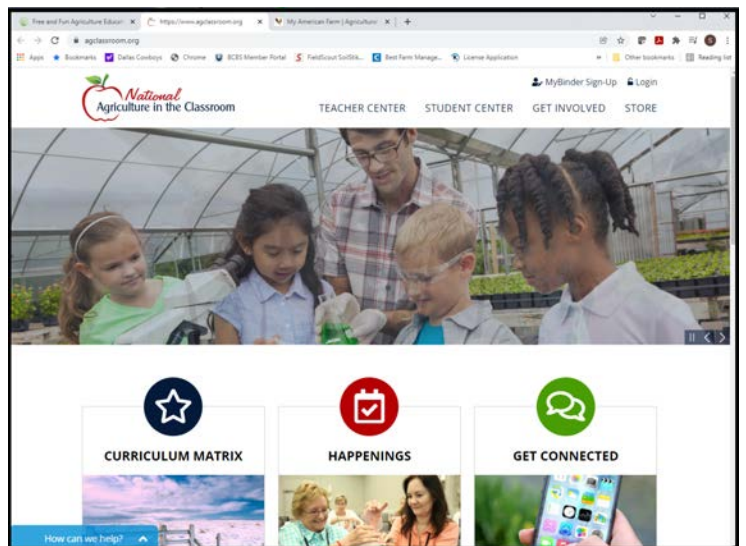

The American Farm Bureau Foundation for Agriculture started the project with the goal of spreading agricultural awareness through interactive games. All the games on the website are geared toward pre-K through fifth-grade students and cover a wide range of subjects, each teaching where our food comes from and how it gets to our plates. Kids can practice math with the "Farmers Market Challenge," learn geography with "Ag Across America," learn about science in "That's Life" and much more. For mobile devices and tablets, you can also download the My American Farm App to play wherever you go.

National Agriculture in the Classroom

National Agriculture in the Classroom is an excellent online resource for ag education.

The program's mission is to increase agricultural literacy for K-12 students through authentic, agricultural-based content. On their website, you'll find e-learning resources organized by grade level, agriculture quizzes and worksheets, project ideas, and more. Parents and teachers can also do a quick search on their Curriculum Matrix for lesson plans by subject. You can even create a personalized binder to store your favorite lesson plans and resources for later.
